Vision Frames v1

Single Source of Truth

---

1. Purpose & Scope

Vision Frames v1 generates **identity-first still images** depicting a *future version of the user* in a grounded moment of presence.

This is **not** a vision board, cinematic reel, fantasy, or productivity simulation.

This document defines all rules, constraints, and guardrails.

If it's not allowed here, it is not allowed anywhere.

---

2. Core Definitions & Language

Allowed framing (locked):

- Future version
- Identity frame
- Arrival
- Presence
- Calm, grounded, composed

Disallowed framing:

- Manifest / manifestation
- Simulation / roleplay
- Wealthy / rich / successful

- Hustle / grind
- Fantasy / dream life
- Glow-up / upgrade

All user and system language must follow this framing.

---

3. User Input Contract (v1)

Users may provide:

- **Identity direction** (non-visual, non-actional)
- **Environment preference** (broad only)
- **Mood / tone**

Users may NOT provide:

- Actions or poses
- Objects or props
- Jobs, roles, or outcomes
- Commands or instructions

Disallowed inputs are **silently stripped or normalized**.

The user is never notified.

---

4. Canonical Internal Prompt (v1)

> Generate a photorealistic image of the **future version of the user** in an **identity-forward arrival moment**.

> The subject is a **single individual**, depicted in a **low-action state** (standing or walking only), expressing calm presence and ownership of space.
>
> The scene must feel grounded, real, and contemporary.
>
> **Do not depict seated positions, active work, object handling, or social interaction.**
>
> Lighting is controlled and cinematic, favoring **night, dusk, or low-key interiors**.
>
> Framing is **medium-wide to wide**, eye-level or slightly low.
>
> Likeness must remain natural and consistent with reference images.
>
> Success is implied through stillness and environment, never through actions, objects, or outcomes.

This prompt is system-owned and final for v1.

---

5. Visual & Action Constraints

Allowed actions

- Standing
- Walking (slow, mid-stride)
- Entering or exiting a space
- Still presence

Disallowed

- Sitting
- Holding objects
- Working or gesturing

- Social or group scenes
- High-action poses

Camera & lighting

- Medium-wide to wide only
- Eye-level or slightly low
- Night / dusk / low-key preferred

---

6. Failure & Auto-Discard Rules

An image is **discarded immediately** if any occur:

- Subject is seated
- Objects or props appear
- Multiple people appear
- Likeness drifts or feels “AI/stock”
- Over-stylized or surreal output
- Explicit wealth or status signaling
- Close-ups or extreme angles

Never fix:

- Face
- Body proportions
- Pose
- Action

If these fail → discard.

---

7. Regeneration Limits & Exit Conditions

- Max **3 generations**
- Max **2 refinements**
- Refinements allowed only for:
    - Lighting
    - Environment tone
    - Minor framing (still wide)

Hard stop if:

- Likeness fails twice
- Same violation repeats
- Quality degrades with retries

System stops silently.

---

8. Language, Copy & Tone Rules

Tone

- Neutral
- Calm
- Observational
- Non-performative

User-facing copy

- No promises
- No outcomes
- No motivational claims

Internal language

- Identity-first
- No productivity or financial verbs

---

9. Platform Safety & Compliance Lock

Vision Frames v1 never depicts:

- Financial gain
- Job performance
- Authority or expertise claims
- Lifestyle guarantees

Always framed as:

- Personal identity
- Non-transactional
- Non-promissory

Risky concepts are **silently removed or neutralized**.

---

10. Version Freeze Statement

Vision Frames **v1 is frozen**.

- One PDF = law
- Canonical prompt is final
- Any change requires **Vision Frames v2**
- No overrides, no exceptions

Vision Frames v1 — System Flow

0) Start

Inputs available:

- Reference images (required)
- User inputs (optional): Identity Direction, Environment Preference, Mood/Tone

---

1) Intake

User provides:

- Identity direction (required)
- Environment (optional)
- Mood (optional)

System blocks user from providing:

- actions/poses, objects, outcomes, commands (not accepted as fields)

---

2) Normalize & Filter (LLM)

LLM transforms user inputs → "Clean Intent"

Rules:

- Strip disallowed words (wealth, manifest, successful, hustle, etc.)
- Remove any hidden action/object requests if they appear anyway
- Keep only:

- identity direction
- environment preference (broad)
- mood

Output: Clean Intent (safe, neutral)

---

3) Compose Canonical Prompt

System builds:

- **Canonical Prompt (verbatim v1)**
  - inserts only allowed variables:
  - identity direction
  - environment preference
  - mood/tone

Canonical prompt always wins.

---

4) Generate Attempt Loop (max 3 generations)

For attempt in 1..3:

- Call image model with canonical prompt + references
- Receive image output

---

5) Automated QA Gate (pass/fail)

Check output against discard rules:

Auto-discard if any:

- seated
- objects/props
- multiple people
- action/work/gesture
- close-up/extreme angle
- surreal/stylized
- wealth/status signaling
- likeness drift / AI-stock feel

If fail:

- discard image
- continue to next generation attempt (if attempts remain)

If pass:

- proceed to refinement eligibility

---

6) Refinement Loop (max 2 refinements)

Only allowed refinements:

- lighting
- environment tone
- minor framing (still wide)

Never refine:

- face, body, pose, action, identity

For refinement in 1..2:

- apply refinement prompt (lighting/tone only)
- rerun model
- re-check QA Gate

If pass:

- output final image

  If fail:

- discard and either:
    - refine again (if remaining), or
    - fall back to generation loop if attempts remain

---

7) Exit Conditions

Success Exit

- A frame passes QA → delivered

Silent Stop Exit

- Attempts exhausted OR hard stop triggered:
    - likeness fails twice
    - repeat violations
    - quality trending worse

System ends clean:

- no explanations
- no warnings
- no “try again” coaching

Artifacts Produced (for dev/UX)

- Clean Intent schema (3 fields)
- Canonical prompt template (verbatim)
- QA checklist (discard rules)
- Retry counters (3 gens, 2 refines)
- Exit states (success / silent stop)
